

CSMAR (China Stock Market & Accounting Research)

CSMAR is a leading global provider of China Financial market data, China industries, and economic data, whether real-time, delayed or historical data to international financial and education institutions. The company is also an industry leader in China in providing financial analytics, financial education and related value-added services to financial institutions, universities and individual investors.

Since from 2000, CSMAR has provided high-quality China market data and reliable professional services to more than 1,000 colleges and universities at home and abroad, and provided quantitative trading services for more than 500 securities companies, private equity funds and other financial institutions.

Drawing inspiration from globally recognized authoritative databases and tailored to China's unique economic landscape, CSMAR stands as a precision-focused resource for economic and financial research. Encompassing a comprehensive array of 19 series, including stocks, companies, funds, bonds, derivatives, economics, industries, overseas data, and more, the CSMAR Database boasts a vast compilation of over 200 databases, exceeding 4,000 tables, and aggregating upwards of 60,000 fields.

CSMAR Database can be accessible via global dual sites, data.csmar.com (domestic site) and global.csmar.com (international site), providing a bilingual interface that supports switching between Chinese, English, and Traditional Chinese. It enables data export and download in 9 formats, including Excel, SPSS, and SAS, along with functionalities such as API calls and cross-database queries.
